> Defines TechTrapture's four data classification tiers and the acceptable-use rules for company systems.

## 1. Classification Tiers

TechTrapture classifies all information into four tiers: Public, Internal, Confidential, and Restricted. Every document, dataset, and system must carry a classification; unclassified data is treated as Internal by default.

Public: approved for external release. Internal: for all employees but not external parties. Confidential: limited to specific teams or need-to-know. Restricted: highly sensitive (e.g., customer PII, security keys, unreleased financials), access logged and tightly controlled.

## 2. Handling Requirements

Restricted data must be encrypted at rest and in transit, accessed only from managed devices, and never sent to personal email or unapproved cloud services. Confidential data follows the same rules except where an approved exception is documented.

Internal and Public data may be handled on MobileGuard-enrolled personal devices per the BYOD Policy.

## 3. Acceptable Use of Systems

TechTrapture systems are provided for business use. Limited personal use is permitted provided it does not interfere with work, consume significant resources, or violate any policy.

Prohibited activities include accessing data without authorization, installing unapproved software on managed devices, disabling security controls, and using TechTrapture systems for illegal activity or harassment.

## 4. Approved AI & Cloud Tools

Only AI assistants and cloud services on the TechTrapture Approved Tools list may process TechTrapture data. Confidential and Restricted data must never be pasted into a public AI tool.

Requests to add a tool to the approved list are submitted through the IT Service Desk.

## 5. Monitoring

TechTrapture may monitor and audit use of its systems for security and compliance. Employees should have no expectation of privacy in data stored on or transmitted through TechTrapture systems.
